

Internet Explorer

Under the red X at the top-right corner of the browser, you should see a gear. If you don't see the gear, look for a menu in that corner labeled **Tools** instead. Click the gear (or **Tools**), and then select **Internet options**. This will bring up the window on the left below. Click the **Delete...** button, which will bring up the window on the right. Uncheck all boxes except the top one and the one labeled **Cookies**, then click the **Delete** button at the bottom. Close and reopen your browser, and try to log in again. Note that this will delete ALL of your cookies, as Explorer does not allow you to delete cookies for just one site.
